

# UNEMPLOYMENT IN TEXAS

These maps show the unemployment rate within the various Texas counties. The map shown below in red was chosen as Texas is often noted as a traditionally red state, and the color represents the severity in some counties. The blue map, shown in the bottom left corner, was chosen because blue is the cooler opposite to the bold red and seems to change the direction of the message through a simple color change. With the blue the unemployment rate seems almost less severe. The final map, shown to the immediate left, was chosen as a middle ground between the harsh red and the cool blue. The added variance of the navy blues, the bright greens, and the yellows seemed to give an entirely different message than that of the prior two maps.
